

In today's digital world, companies are beginning to realise that it is necessary to work their business in a more agile way than before. Many organisations are turning to digital transformation to stay ahead of competition.

A key component of the transformation roadmap is the data centre. As data volume grows, coupled with demand for more flexible IT capabilities, organisations are looking into data centre deployment to maximise technology efficiencies.

PWS, having managed more than 1,000 projects worldwide, is the data centre expert committed to delivering first-class service with cutting-age technologies. The company offers solutions required for data centre deployment, helping clients save time and eliminates the substantial costs needed to establish a robust IT environment.

Their team of trusted professionals are capable of delivering some of the most advanced projects, from design & build, consultancy, cloud computing to IT infrastructure migration, to meet every client's unique business requirements.

PWS' clientele ranges from government, telcos, education and healthcare providers, financial institutions to SMEs. PWS' experience gives organisations the confidence that the necessary scalability and flexibility are in place to digitally transform their businesses to meet the needs of today and tomorrow.
